Surgical Post-Operative Splints
Sir Koff-A-Lot - Koff Heart - Koff Cushion

Mending hearts is what we do best!

HOW TO USE "SIR KOFF-A-LOT"

**OPEN HEART
SURGERY**

The patient places one hand directly over the bear's face and the other hand over the bear's belly. Clutching the bear against the incision, the patient coughs and breathes deeply as needed.

**CHEST
SURGERY**

The patient takes the face of the bear's head in the hand which is on the same side as the chest incision. With the bear's back underneath patient's elbow and clutched to incision, the patient coughs and breathes deeply.

**ABDOMINAL
SURGERY**

With one hand over the bear's face and the other hand over his belly, the patient holds the bear over his/her abdomen and coughs. Generally, Sir Koff-A-Lot works best if his body is in line with the incision.
